

AWS SAA-C03

Week 01:-

Defining IAM Rule:-
And setting up CLI:-

↳ Never use the root user for CLI workflows.

↳ Create new users.

↳ New user creation.

Steps: ↳ IAM console

↳ Users → New user

↳ Name

↳ (for root) provide access to

AWS Management Console ☒

[if only want to access it from AWS CLI].

↳ If creating for someone else ☒ user must create new password.

↳ For root also give admin access from Permission Policy.

↳ Open newly created user

↳ Security Creds

↳ Access - Key → Create new

↳ CLI → Create

Configure the CLI:

Command: `aws configure`

↳ Add access key and secret key

Verify Configuration:-

Command: `aws sts get-caller-identity`

↳ Using root account for daily work is an architectural anti-pattern and a security risk.

Check the connectivity:-

Command: `aws s3 ls`

Rent access to the services.
Pay as you go.

Key features:-

Computer
Storage
Database

→ Scalability

→

Horizontal

Vertical

SaaS

PaaS

IaaS

→ Speed.

→ Reliability.

→ Security

IaaS :-

Renting a car

PaaS :-

Taking an user

Maintenance

Ownership

SaaS :-

Being on a Bus.

FaaS :-

only Run a fun.

Cloud Deployment Model :-

Private Cloud :-

→ Hardware is designed for your specific needs

Public Cloud :-

→ Internet accessible.

→ Hardware is listed, just the one for your needs.

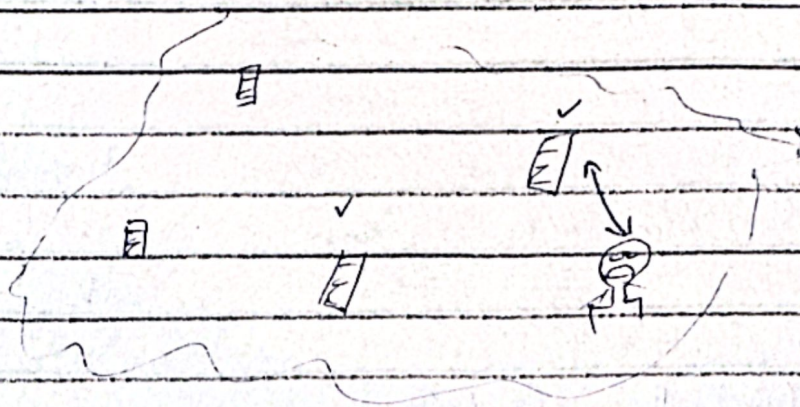

Multi-cloud:-

→ Using Different Cloud providers.

Community:-

→ Managed By the community.

Regulations on Cloud:-

→ For the country of the user.

→ For the home country.

→ For personal data of anyone.

PII :- Personally Identifiable Info.

→ Most important to handle correctly.

Cloud Architect:-

↳ Solutions Architect of Cloud.

Cloud Providers: [Till 2023]

AWS	Microsoft Google	Google Microsoft
→ EC2, S3, Redshift etc Sagemaker ↓ For training model etc.	→ Data Lake Storage, Machine Learning etc ↓ Ottawa Hospital Case Study for Azure.
